

YOUR PATH TO SECURE COMPANY AI

Retrieval Augmented Generation (RAG)

From secure data
integration to
efficient application.

Find out how **Retrieval
Augmented Generation**
can make your
company's AI reliable
and future-oriented.

Duration: 2 hours

Number: by arrangement

Location: by arrangement

Get-Together

CONTENTS

What is Retrieval Augmented Generation (RAG)?

- What are embeddings and feature vectors?
-

Sensitive data in LLMs

- What is sensitive data?
 - How can I use data securely in AIs?
-

Use cases

- AI as a mentor for onboarding
 - Talking about contracts with the chatbot
-

Building a company's own AI

- **Preparing the documents**

- Loading
- Clean Up
- Splitting
- Indexing

- **Tools**

- LangChain
- Semantic Kernel
- Azure AI Studio

Get-Together with personal exchange

In our workshop „**Retrieval Augmented Generation (RAG): Your Path to Secure Enterprise AI**“, we will take an in-depth look at integrating advanced AI technologies into the enterprise world to ensure sensitive data remains protected while increasing efficiency and productivity.

We will start by introducing the concept of Retrieval Augmented Generation, explaining the importance of embeddings and feature vectors and how these form the basis for intelligent AI systems.

We then discuss the challenges of handling sensitive data in Large Language Models (LLMs) and present practical solutions for securely integrating data into AIs. Using application examples such as AI mentors for onboarding new employees and chatbots for contract documents, we illustrate how retrieval augmented generation can be used in real-life scenarios.

Finally, we provide an overview of how to build an AI, from document preparation to the frameworks that are essential for developing a safe and effective corporate AI, including LangChain, Semantic Kernel and Azure AI Studio.

We focus on intelligent solutions and create a modern, protected environment for your data and innovations –

Redefining security and efficiency in your company's AI.
